for professional soccer clubs

www.dathlos.com

D4SOCCER Perform

The solution for Trainers and Coaches

Performance Management and Analysis

With configurability of training models and relative monitoring

Maximize Competitive development And the ability To identify Talent

Visibility of athlete's health status

(managed in the medical module)

- Athletes with no physical or health problems.
- Athletes who currently have slight illnesses or sports injuries.
- Injured Athletes (not available) with expected racing availability date.

Monitoring of injured athletes' rehabilitation

(managed in the medical form)

- Visibility of rehabilitation situation coordinated by the Medical department.
- Management of the return to sports, in collaboration with Doctors/Physical therapists.

Visibility of sports activities calendar

- Training activities.
- Competitions (league, cup, tournaments, friendlies, training matches).

Management of Games Scoreboard and athlete performance in sports competitions

- Markers, substitutions, minutes, etc.
- Data from "wearable" devices.

Training and performance management for youth teams

- Management of Training model.
- Focus on macro-skills development and relative micro-abilities (psychomotor skills, coordination skills, conditional skills, joint mobility, proprioception, technical skills, tactical skills).
- Weekly scheduling of Training sessions referring to a company timing model for the different macro-skills.
- Execution and finalization of Workouts with progressive monitoring of minutes in real-time and of the deviations from the company model.
- Analytical performance dashboards for teams and for individual athletes.
- Pie charts on time allocation for various macro-skills.
- Multi-dimensional performance index using a "radar graph" to summarize the athlete's position in various anthropomorphic, performance and evaluation dimensions.
- Comparative analysis with team average, team average in the superior team category, or with another athlete.

The Dathlos mission

Offer a digital information system focused on data so as to enable professional Soccer Clubs to innovate, help athletes improve, and increase their own competitiveness.

Medical Sector

D4Soccer is a set of Web/Cloud application modules for Talent Management through the analysis of sports performance and the management of athletes' injuries.

D4SOCCER Medical The solution for Doctors and Physical therapists
